

SPO. Owen Splitters

The Owen splitter provides multiport capability (2-way to N-way), with unequal splits possible to any of the ports. Like all resistive splitters it offers very wideband performance. What sets this splitter apart from others (wye or delta splitters) is that the Owen splitter achieves maximum output to output isolation. In this respect there is no better resistive splitter! Wide Bandwidth. Better isolation between split Ports than wye or delta splitters. Available with N, SMA, BNC Connectors in 50 or 75ohm

The cases are machined from Aluminium alloy and have a Nickel plated finish.

As standard parts we offer 2 way and 4 way units with N, BNC or SMA connectors
